

### Solution:-

```
package constructorchaining;

public class constructorchaining {
    public static void main(String s[])
    {

//      child class constructor C called for both super & child constructor
statement.
        C c1=new C();

    }

}

class P
{
    public P()
    {
        System.out.println("I m super class Constructor");
    }
}

class C extends P
{
    public C()
    {
        super();
        System.out.println("I m child class Constructor");
    }
}
```

### Output:-
